

• PITCH DECK • VALSEA HACKATHON

Alove Voice into action

A **Speech-to-Workflow** platform for Vietnamese businesses — turning a single spoken sentence into a completed transaction.

First vertical: bus ticketing

Natural Vietnamese

Realtime

- WHAT JUST HAPPENED IS NOT SPEECH-TO-TEXT

One phone call. One complete workflow.

OUTPUT

• THE PHONE IS STILL A MANUAL WORKFLOW

Customers speak. Staff have to turn that speech into data themselves.

INPUT

“Book me a ticket to Da Lat tomorrow”

FOUR MANUAL STEPS

Listen

Take notes

Look up

Key into the system

THREE CONSEQUENCES

Long waits

Peak hours create queues and missed calls

Errors

Regional accents, code-switching, noisy audio

Hard to scale

More volume means almost linearly more headcount

• ALOVE: FROM VOICE TO ACTION

Alove is a Speech-to-Workflow platform for business.

A TYPICAL VOICE BOT	ALOVE
Produces a transcript	Understands intent and business data
Answers questions	Executes every step of the workflow
Ends with a conversation	Ends with structured output

Understand

Act

Complete

First vertical: booking bus tickets in natural Vietnamese.

• CORE TECHNOLOGY

Listen → Understand → Act → Respond

VOICE AGENT

The customer's voice

VALSEA Realtime STT

LLM Voice Agent

Google Chirp3-HD TTS

A natural spoken response

↔ TWO-WAY WITH THE LLM

AI BOOKING AGENT

- ◆ Finds trips and collects passenger details.
- ◆ Holds the seat while the conversation finishes.
- ◆ Reads back the itinerary, time, seat and price.
- ◆ Issues the ticket only after **explicit confirmation**.
- ◆ Returns a structured ticket, not just a transcript.

- A VOICE AGENT BUILT FOR REAL-WORLD VIETNAMESE

Four capabilities of the listening and speaking layer

VALSEA REALTIME STT

Northern, Central and Southern Vietnamese, Vietnamese-English code-switching, tone marks, noisy audio and 8 kHz telephony quality.

LLM

Understands intent, extracts data, manages multi-turn dialogue and asks again when information is ambiguous.

REALTIME DIALOGUE

VAD, end-of-turn detection, barge-in support.

GOOGLE CHIRP3-HD TTS

Natural, polite Vietnamese responses in near real time.

3 regions

VN-EN

noisy audio

telephony 8 kHz

realtime

- ONE CORE TECHNOLOGY, MANY WORKFLOWS

Bus operators are the first vertical, not the final limit.

Every branch ends in a **workflow-ready output**, never in a transcript.

- PEOPLE BECOME AGENT MANAGERS

AI does not replace people. It replaces repetitive work.

- **AI** handles listening, recording, data entry and the repetitive steps.
- **Staff** supervise several agents, check the results and handle exceptions.
- **Businesses** grow service capacity without growing headcount at the same rate.
- **People** focus on judgement, empathy and customer relationships.

“

*Alove doesn't just help businesses hear
their customers. Alove turns what
customers say into work already done.*

• THANK YOU

Alove Voice into action

Turning what customers say into work already done.
